

**Siva Lokesh T**  
**Sr. Java Full Stack Developer**

**Email Id:** [tdsivalokesh@gmail.com](mailto:tdsivalokesh@gmail.com)

**Phone:** +1 669-234-8065

**LinkedIn:** [linkedin.com/in/lokesh-telaprolu](https://www.linkedin.com/in/lokesh-telaprolu)

---

**Professional Summary:**

- Experienced Senior Java Full Stack Developer around 10+ years of expertise in designing, developing, and deploying high-performance web applications.
- Proven ability to manage both front-end and back-end development, with a strong focus on scalable, secure, and user-centric solutions.
- Seeking a challenging role to leverage deep technical skills, modern frameworks, and best coding practices to deliver innovative products that align with business goals and enhance customer experience. Passionate about continuous learning and driving success through technology.
- Experience in all phases of Software Development Life Cycle (SDLC), which includes Integration, Implementation, Interaction, Business Analysis/Modeling, Documentation, and Testing of all software applications.
- Ability to efficiently translate algorithms, ideas, and concepts to software applications.
- Expertise with Object Oriented Design (OOD), Object Oriented Analysis (OOA), Object Oriented Modeling (OOM) based on Unified Modeling Language (UML) architecture.
- Developed reusable and modular Angular 11 components, such as directives, pipes, and services, to improve code maintainability and scalability.
- Expertise in developing SOA (Service Oriented Architecture), REST and J2EE Web Services based on SOAP, BPM, WSDL, UDDI, JAX-WS, JAXB, JAX-RPC using tools like Apache Axis and Developed RESTFUL web services using Spring MVC.
- Good knowledge on reading and following UML design documentation such as Database, and Data Flow diagrams.
- Proficient in design and rapid development of web and J2EE applications using Core Java, JSP, JSF, CSS, Servlets, EJB, JavaScript, Spring, JDBC, JNDI, JMS, SWING, HTML/DHTML, XML and Struts framework.
- Experience in Agile software development process, Test Driven Development and Scrum.
- Implemented Angular 11 Routing to enable navigation and URL management within the application, improving user engagement and SEO.
- Experience in client side designing and validations using HTML, CSS, JavaScript, AJAX, jQuery, React JS and NodeJS
- Utilized Java 8 features like Lambda expressions and Stream API for Bulk data operations on Collections which would increase the performance of the Application.
- Experience in developing client-side validations using React JS, and in developing Custom pipes, Shadow DOM.
- RIA applications using Flex, HTML5, CSS, Ajax, Dojo and Node JS
- Have good experience on NoSQL database like Mongo.
- Utilized AngularJS Forms to implement user input validation and data binding, improving data integrity and security.
- Proficient in MVC architecture using spring framework / JSP-Servlet and J2EE Design Patterns.
- Expertise in Struts and Hibernate Frameworks.
- Developed Graphical User Interfaces using UI frameworks React JS, and Webpage's using HTML, CSS and JSP's for user interaction.
- Good knowledge on AWS cloud formation templates and configured SQS service through Java API to send and receive the information.
- Comprehensive knowledge in RDBMS databases like Oracle 10g/11g, SQL Server 2005, 2008, DB2, and MySQL 4.x, 5.0.
- Development experience in Windows, Linux, Mac OS, Docker containers and UNIX operating systems.
- Used DAO access and writing DML, DDL and triggers for DB2 database and other client environment specific tools to design the client module.
- Experience in working with build management tools like Ant, Maven and Jenkins.
- Experience in installing, configuring, tuning Apache Tomcat, WebLogic and WebSphere.
- Ability to work individually as well as in a team with excellent problem-solving skills, troubleshooting capabilities, learn new tools and concepts.

- Worked on IDEs such as Eclipse/My Eclipse, JBuilder.
- Comprehensive knowledge in databases like MySQL, SQL Server, DB2 and Oracle writing Triggers, Stored Procedures and Normalization of databases.
- Proven experience with Application Servers like IBM WebSphere 6.x/5.x/7.x, Oracle/BEA WebLogic9.x/8.x/7.x/6.x, JBoss and Tomcat 5.x/4.x/3.x.
- Excellent troubleshooting & problem-solving skills with Client-Server Applications & Web Application.
- Designed Use Case Model, Use Case Diagrams, and Class Diagrams, sequence diagrams.
- Expertise in using issue tracking tools such as Quality Center and JIRA.

## Technical Skills

|                                  |                                                                                                                                                                                                                                                |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Languages</b>                 | Java (J2EE), Core Java, TypeScript, JavaScript, SQL, PL/SQL, HQL, Kotlin, Python                                                                                                                                                               |
| <b>Backend &amp; J2EE</b>        | Spring Boot, Spring MVC, Spring Core (IoC), Spring AOP, Spring Security, Spring Batch, Spring Data JPA, Hibernate, JDBC, Servlets, JSP, JSTL, EJB, JNDI, JMS, Apache Camel                                                                     |
| <b>Frontend / UI</b>             | HTML5, CSS3, JavaScript (ES6+), React.js, React Native, Redux, AngularJS, jQuery, Bootstrap, Next.js, AJAX, Node.js, NPM                                                                                                                       |
| <b>Web Services &amp; API</b>    | RESTful APIs, SOAP, JAX-RS, JAX-WS, GraphQL, SOA, Microservices Architecture, API Design, OAuth2, JWT, Swagger/OpenAPI (3.0), Keycloak, SAML 2.0, SSO                                                                                          |
| <b>Databases &amp; Caching</b>   | Oracle (9i–12c), MySQL, PostgreSQL, MongoDB, Cassandra, DynamoDB, Redis, Ehcache, Hazelcast                                                                                                                                                    |
| <b>ORM &amp; Persistence</b>     | Hibernate, JPA                                                                                                                                                                                                                                 |
| <b>Messaging &amp; Streaming</b> | Apache Kafka, RabbitMQ, ActiveMQ, JMS                                                                                                                                                                                                          |
| <b>Cloud Platforms</b>           | AWS (EC2, S3, RDS, Lambda, ECS, EKS, Fargate, SQS, VPC, IAM, CloudWatch, Route 53, Kinesis, MSK, CodePipeline, CodeDeploy, API Gateway), Azure (Azure DevOps, Functions, Logic Apps, Cosmos DB, Blob Storage, AAD), Google Cloud Platform(GCP) |
| <b>Monitoring &amp; Logging</b>  | ELK Stack, Prometheus, Grafana, Splunk, CloudWatch, Log4j, SLF4J, Logback                                                                                                                                                                      |
| <b>DevOps &amp; Build Tools</b>  | Docker, Kubernetes, Helm, Jenkins, Maven, Gradle, Ant, CI/CD Pipelines, CloudFormation, GitHub Actions                                                                                                                                         |
| <b>Testing &amp; QA Tools</b>    | JUnit, Mockito, TestNG, Selenium, Postman, Swagger, SOAP UI, Apigee, Cucumber, SonarQube, JMeter, Jest, Cypress, Jasmine, Enzyme, React Testing Library, Test-Driven Development (TDD), Behavior-Driven Development (BDD)                      |
| <b>Servers &amp; Containers</b>  | Apache Tomcat, JBoss, GlassFish, WebLogic, WebSphere, IBM HTTP Server                                                                                                                                                                          |
| <b>Version Control</b>           | Git, GitHub, GitLab, Bitbucket                                                                                                                                                                                                                 |
| <b>IDEs &amp; Tools</b>          | IntelliJ IDEA, Eclipse, NetBeans, Android Studio, IBM RAD                                                                                                                                                                                      |
| <b>Methodologies</b>             | Agile, Scrum, Object-Oriented Programming (OOP), Design Patterns, TDD, BDD                                                                                                                                                                     |
| <b>Project Management Tools</b>  | JIRA, Confluence, Trello                                                                                                                                                                                                                       |

## **Professional Experience:**

**Client: TD Bank, NJ**

**Aug 2023 – Till date**

**Role: Sr Java Full Stack Developer**

### **Responsibilities:**

- Designed and developed REST-based Microservices using Spring Boot and Spring Data JPA, documented with Swagger.
- Implemented Kafka messaging pipelines for event-driven microservices; developed Kafka producers/consumers for async processing and log streaming.
- Built and maintained client-side applications using Angular 10/11 and AngularJS, creating custom pipes, validators, and services, and integrating with RESTful APIs and web sockets.
- Developed interactive React JS components using state, specs, props, keys, and events, implementing MVVM architecture with Redux for state management.
- Designed Redux state containers with actions, action creators, and reducers to handle state updates and asynchronous data fetching.
- Worked with React Native components, including Forms, Events, Keys, Navigation, and Redux concepts for mobile development.
- Developed and optimized Next.js applications by leveraging server-side rendering (SSR), implementing dynamic routing, and improving performance with lazy loading and caching.
- Designed and developed REST-based Microservices using Spring Boot and Spring Data JPA, documenting API endpoints with Swagger.
- Utilized core Spring Framework modules, including IOC, MVC for handling client requests, AOP for exception handling/logging, and Spring Batch for cron jobs and file generation.
- Implemented authentication and authorization using Spring Security, configuring filters and Single Sign-On (SSO) via HTTP headers.
- Applied Core Java 8 concepts, including multi-threading, collections, garbage collection, and various design patterns.
- Built RESTful and GraphQL APIs using Kotlin with Spring Boot, integrating efficiently with MongoDB.
- Developed and consumed SOAP web services using JAX-WS, JAX-RPC, JAXB, JAXP, XML, and WSDL.
- Integrated GraphQL APIs using Apollo Server or GraphQL Yoga on the backend and consuming data with Apollo Client or Relay on the frontend.
- Implemented client-side caching strategies with Apollo Client's in-memory cache to reduce API calls and improve performance.
- Managed and exposed APIs as products using the Apigee API Gateway.
- Performed back-end testing (JUnit, Mockito) and API testing (Postman, SOAP UI).
- Ensured front-end code quality with unit, E2E, and snapshot tests for Angular and React using Jasmine, Jest, React Testing Library, and Enzyme (for shallow/full rendering).
- Implemented behavior-driven development (BDD) using Cucumber and Ruby.
- Maintained over 95% code coverage verified with SonarQube, and used Log4j for application logging.
- Worked with relational (SQL Server) and NoSQL (MongoDB) databases, including schema design and data retrieval/updates.
- Migrated projects to a cloud environment by creating Docker scripts to build, tag, and push images to a registry, and deploying containers on AWS EC2.
- Orchestrated containers using Kubernetes, including configuring and testing pods.
- Utilized AWS S3 for data storage and integrated document uploads using Apache Camel's AWS component.
- Leveraged Azure cloud services for IaaS (VMs, storage, networking) and serverless computing (Azure Functions, Logic Apps).

**Environment:** Java 8, Spring Boot, Spring MVC, Apigee, Angular 10/11, React JS, Node JS, JSP, HTML5, JavaScript, XML, XSD, XSLT, CSS3, JPA, JUnit, jQuery, SOAP/REST, Webservices, AWS Lambda, Next.js's Apache CXF, Typescript Cucumber, Spring Security AWS, Jenkins, RAD, Mockito, Eclipse, MongoDB, Kotlin, PostgreSQL, JAX-WS, Redux JAXB, JAXP, GIT, Maven, JBOSS, Log4j, Kubernetes.

**Client: CVS, RI**

**May 2022 to July 2023**

**Role: Sr Java Developer**

**Responsibilities:**

- Participated in all phases of the SDLC using Agile methodology, including requirements analysis, system design, development, testing, and deployment.
- Implemented Spring Framework for Dependency Injection and Data Access Object (DAO) pattern, integrated with Hibernate ORM.
- Designed and developed RESTful Microservices integrated with Mongo DB using Spring Boot, Spring MVC, Spring Data JPA, and documented them using Swagger.
- Developed Kafka producers and consumers to handle asynchronous data streams, logging, and inter-service communication.
- Secured services with Spring Security and JWT tokens; integrated Single Sign-On (SSO) via Azure Active Directory (AAD).
- Developed user interfaces using HTML5, CSS3, Bootstrap, JavaScript, TypeScript, Angular 6/7/8/11, and Node.js.
- Created reusable Angular components, custom pipes, validators, and services for data handling and UI logic.
- Integrated frontend with REST APIs and WebSocket connections to enable real-time data exchange.
- Built modular and responsive web applications using Angular and Bootstrap with cross-browser compatibility.
- Developed and maintained React and Next.js applications with server-side rendering (SSR), dynamic routing, and SEO optimizations.
- Implemented Redux for state management; created reducers, actions, middleware, and used Redux DevTools for debugging.
- Integrated GraphQL APIs using Apollo Client and implemented schema stitching for modular API architecture.
- Designed caching strategies, implemented lazy loading, and optimized application performance and bundle size.
- Developed reusable React components and forms using controlled/uncontrolled components and React Hooks.
- Wrote unit and E2E tests using Jasmine, Jest, React Testing Library, Enzyme, and Selenium for functional validation.
- Followed BDD principles using Cucumber; developed feature files and Java-based step definitions for automated tests.
- Implemented client-side caching using Apollo Client's in-memory cache for reducing API load.
- Consumed SOAP and RESTful web services using JAX-RS, JAX-WS, JAXB, and Apache CXF.
- Used Hibernate ORM for mapping Java classes to database tables; handled CRUD operations and configuration.
- Developed PL/SQL stored procedures, functions, triggers, and packages in Oracle for transactional processing.
- Created Docker files and deployed microservices as containers via AWS ECS; used AWS CodePipeline for CI/CD.
- Configured and launched AWS EC2 instances, managed DNS with Route 53, and stored assets in S3 buckets.
- Deployed services in Kubernetes; configured and tested pods in a High Availability (HA) environment.
- Used Azure DevOps for CI/CD automation, version control, and release pipelines.
- Worked with Azure Functions, Logic Apps, Azure SQL Database, and Cosmos DB for cloud-native applications.
- Stored and processed large datasets in Azure Blob Storage and Data Lake.
- Developed REST/GraphQL APIs using Kotlin with Spring Boot and integrated MongoDB as the backend.
- Used Apache Camel's AWS components for automated document uploads to S3.
- Logged application events using Log4j; ensured high code quality using JUnit, Mockito, and SonarQube standards (95%+ coverage).
- Collaborated on code reviews, activity management, and file handling following enterprise SOPs.
- Migrated legacy systems and services into a Kubernetes and Docker-based cloud environment.
- Resolved QA, UAT, production, and post-deployment issues, ensuring smooth application support.

**Environment:** Java 1.7, Spring 3.x, Hibernate ORM, React JS, Angular 7/ 6, Spring Boot, Redux Typescript Microservices, JSP, HTML5, JavaScript, Spring AOP, XML, XSD, XSLT, SOAP/REST, Next.js's Webservices, Cucumber, JAX-WS, JAX-RS, Docker.

**Client: Union Bank of Switzerland, NY**

**Feb 2020 to April 2022**

**Role: Java Developer**

**Responsibilities:**

- Analyzed business requirements and participated in design, development, and testing of banking modules in an Agile team environment.
- Developed backend business logic using Java EE, Spring MVC, and Hibernate to support user operations, transactions, and account services.
- Created and consumed RESTful web services and integrated with third-party systems using Apache Axis and XSLT.
- Wrote SQL and HQL queries for CRUD operations; managed data persistence in MongoDB and SQL Server.
- Secured application endpoints using Spring Security and implemented session and role-based access control.
- Designed and implemented Single Page Applications (SPAs) using AngularJS, HTML5, CSS3, and Bootstrap.
- Developed reusable components using AngularJS controllers, views, and services for modular UI design.
- Utilized AJAX and jQuery for asynchronous UI updates and dynamic content rendering.
- Created dynamic forms, user-friendly navigation, and responsive layouts optimized for cross-device compatibility.
- Used Backbone.js and Require.js for client-side MVC structure and asynchronous module loading.
- Deployed full-stack web applications to WebLogic Application Server, configured resources and monitored logs.
- Ensured SEO compliance, accessibility, and responsiveness using best front-end coding practices.
- Participated in code reviews, bug fixes, and sprint demos as part of a cross-functional Agile team.

**Environment:** JAVA EE, JUnit, AJAX, html, jQuery, JSP, JavaScript, Mongo Db, SQL Server, Web services, Apache Axis, XSLT, Servlets, Struts Tiles, HTML, XML, Spring, Spring Security, Spring MVC, Hibernate, Log4j, WebSphere, TOAD, Tortoise SVN.

**Client: Dell Technologies, TX**

**Sep 2018 to Jan 2020**

**Role: Java J2EE Engineer**

**Responsibilities:**

- Followed Agile software development practice paired programming, test driven development and scrum status meetings.
- Designed a SOA compliance and multi-tenant architecture using Spring MVC, Mule ESB and Rest service (Jboss Rest-Easy), Jboss Drool, JBPM and Jboss EAP 6.
- Working on Mule Flow implementation and integration with third party tools like Drool, Engage One and File net.
- Effectively interacted with team members and business users from different regions for requirements capture and analysis.
- Assisted with integrating micro-services with Docker container to build and deployed the project on AWS EC2 instance.
- Implemented Singleton, factory design pattern, DAO design Patterns based on the application requirements.
- Worked on creation of custom Docker container images, tagging and pushing the images to the servers.
- Designed and implemented the UI using HTML, JavaScript, CSS, jQuery, JSON and AJAX.
- Developed Spark code using Scala and Spark-SQL for faster testing and data processing also Created, maintained, and backed up MS SQL Server using scripts.
- Imported and managed multiple corporate applications into SVN.
- Created SQL Statement, Stored Procedure, and PL/SQL using Oracle SQL Developer.
- Log4j is used for debugging process and the application was built with Maven.
- Developed the unit test cases using JUnit.

**Environment:** Java, J2EE, Spring, Hibernate, HTML, JavaScript, CSS, jQuery, JSON, AJAX Eclipse, WebLogic, Spark, JMS, Maven, Restful, PL/SQL, JUnit, Drools, SVN, Windows, Unix.

**Client: CTIS Inc, MD**

**Nov 2017 to Aug 2018**

**Role: Software Engineer**

**Responsibilities:**

- Implemented various design patterns such as Business Delegate, DAO, DTO, Service Locator, Session Facade, View Helper, and Value Object.
- Developed Hibernate mapping files and configurations for database persistence.
- Utilized Java Persistence API (JPA) for data persistence.
- Utilized JUnit for unit testing, integration testing, and production testing.
- Used ANT Builder for code building and Log4j for logging.
- Integrated Spring Framework with Hibernate for dependency injection.
- Used SVN as the Version Control System.
- Improved functionality by writing JavaScript and jQuery to manipulate data from APIs.
- Used HTML to make changes on the UI based on the requirement.
- Used Spring framework for the business layer using Spring Core, DAO, Spring ORM, and Spring Web MVC.
- Implement the Business Rule and Workflow using Jboss Drool and Jbpm.
- Used Hibernate as an ORM tool for connecting to the database and accessing information.
- Writing test scripts using groovy for automation testing of the web service.
- Communicated with other system by using the Restful web services.
- Utilized Spring MVC architecture for presentation and business layers.

**Environment:** Java 8, Servlets, spring, Hibernate, Restful web services, Apache, JSON, XML, Tomcat Server 6 and MySQL

**Client: Edla Info Tech, India**

**July 2014 to Aug 2017**

**Role: Sr Software QA Analyst**

**Responsibilities:**

- Designed and developed automated test scripts using Selenium WebDriver with Java for web application testing.
- Created reusable functions and maintained modular test frameworks to support regression and functional test suites.
- Actively involved in manual and automation testing, including test case creation, execution, and result analysis.
- Performed functional, regression, integration, system, and end-to-end testing across various application modules.
- Executed tests across multiple browsers and platforms to ensure cross-browser compatibility.
- Handled dynamic web elements using advanced XPath and CSS selectors.
- Used data-driven testing techniques to validate application behavior under different input conditions.
- Collected and validated test data using SQL queries on PostgreSQL to ensure backend data integrity and accuracy.
- Participated in Agile/Scrum ceremonies, including sprint planning, daily stand-ups, and retrospectives.
- Logged and tracked defects using tools like JIRA, collaborated closely with developers to resolve issues.
- Reproduced and documented issues observed in QA, UAT, and production environments.
- Conducted test execution, debugging, and failure analysis to support rapid delivery cycles.
- Maintained detailed test documentation, including test cases, bug reports, and daily status updates.
- Performed UI, functional, backend, and data validation testing to ensure complete coverage.
- Ensured regression coverage by maintaining and executing automated test suites regularly.
- Utilized Google Suite (Docs, Sheets, Drive) for collaborative documentation, reporting, and tracking test artifacts.
- Worked in both Windows and Linux environments for script execution, backend testing, and log analysis.

**Environment:** Java, Selenium WebDriver, PostgreSQL, JIRA, Windows, Linux, Agile, Manual Testing, Regression Testing, Functional Testing, TestNG, Git, Google Suite.
